

KYOCERA Net Admin

Web-based device management so you can be in control anywhere, anytime.

Device Management – Anywhere, Anytime

There has been a constant shift towards the virtual office – people can work from anywhere, at anytime. IT managers and administrators have the same need when managing their network enabled print devices. Through web-based KYOCERA Net Admin, tasks that used to require multiple programs or walking to each device can now be accomplished virtually, in a single, fast and modern environment.

KYOCERA Net Admin is the single solution for device management and reporting. It enables IT administrators to effectively monitor networked devices within departments and workgroups to ensure high performance and maximized productivity. View toner usage, paper levels, device configuration, and employee print behavior at-a-glance. You can also customize the interface to view only the features you want to see – it's device management your way.

- Automated web-based discovery of network devices
- Comprehensive display of device information (settings, counters, users, address book, logs, etc.)
- Remote configuration of device settings and properties
- Device management within one easy to use interface
- Device status notifications (e.g. paper jam, low toner) via e-mail
- Customizable views for device groups according to dynamic criteria (e.g. all devices with low toner)
- Map display with user defined background
- Export of device information and counter data for analysis
- Multi set: Simultaneous configuration of single and multiple devices Default and custom views
